

SERTOTOOL SERTOMATIC

USP'S SERTOTOOL/SERTOMATIC:

- Pre assembling
- Sertotool sizes: 4-10 mm Sertomatic sizes: 10-35 mm
- A constant quality, same tightening torque
- No friction on the surface due to axial assembly
- Ergonomic. Low physical power needed, the Sertomatic is activated with foot switch
- Special adapters for constant quality
- Easy and fast assembling of larger sized couplings
- Timesaving: 30 seconds, compared with traditional method 3 minutes, per assembly with the Sertotool
- Saves a lot more time while assembling larger sizes
- Suitable for construction areas

EXAMPLE:

700 couplings per year, means 1400 assemblies.

	Time/assembly:	Assemblies/Hour	Total assembly time
Normal	3 min	20	70 Hour
SERTOtool	30 sec	120	12 Hour

*Saves 58 hours!

SERTOMATIC

The SERTO pre-assembly tool is driven by compressed air and can be set up easily anywhere due its small size and light weight. Each device has a rotatable tool insert, which is suitable for a specific material (M brass, stainless steel, stainless SOL, etc.) and can not be misplaced.

SERTOTOOL

For assembling larger diameters we prefer to use the SERTOMATIC. SERTOMATIC is equipped with a strong electro-hydraulic pump which allows fast assembling of all serto couplings. The SERTOMATIC is suitable for assembling couplings up to 35 mm diameter.
